

Motivational-Model

Who	Do	Be	Feel	Concerns
Student	Navigate analytics dashboard	Easy to navigate	Relaxed	Some students might not want to be monitored
Lecturer /Teacher	Display interaction analytics	Resourceful	Informed	Students might get stressed out if they see that they didn't study much
	Activate/deactivate dashboards for categories /subjects	Informative	Motivated	Information might be too complex for students to make use of
	Collect (+ preprocess) canvas analytics	Personalised	Mindful	A student that does not interact with canvas might not interact with the dashboard either
	Store student data (depends if canvas API already does this)	Secure		
	To personalize the dashboard	Low maintenance
